

IN THE CLAIMS:

1.-12. (cancelled)

13. (Currently amended) The book according to claim ~~[[10]]~~ 31 wherein the front surfaces of the first and second sheets comprise lined notebook surfaces and ~~there is the~~ one type of related material comprises a graphic image/element on the front surface of at least one of the first and second sheets.

14.-19. (Cancelled)

20. (Currently amended) The book according to claim ~~4~~ further comprising a front 31 wherein the sheets in the first plurality of sheets each has a peripheral edge and a cover ~~[[that]]~~ fully overlies the peripheral edges of the sheets in the first plurality of sheets.

21.-33 (Cancelled)

34. (New) A book comprising:

a first plurality of sheets each having a peripheral edge and oppositely facing front and back surfaces; and

a binding that maintains the first plurality of sheets together in a stacked arrangement with a top sheet, a bottom sheet and a second plurality of sheets between the top and bottom sheets,

the second plurality of sheets comprising: a) first and second sheets having one type of related material on the front surfaces thereof; b) third and fourth sheets having another type of related material on the front surfaces thereof that is different than the one type of material; c) at least one sheet between the first and second sheets; and d) at least one sheet between the third and fourth sheets,

the peripheral edges of the first plurality of sheets configured so that a user can: a) engage the book at a first location and flip through the book from front to back to serially expose the front surfaces of the first and second sheets without exposing the front surface of a sheet between the first and second sheets or the front surfaces of the third and fourth sheets; and b) engage the book at a second location spaced from the first location and flip through the book from front to back to serially expose the front surfaces of the third and fourth sheets without exposing a front surface of a sheet between the third and fourth sheets or the front surfaces of the first and second sheets,

the first plurality of sheets comprising a sheet that directly overlies the first sheet and has a back surface with the one type of related material thereon so that as the user flips through the book from front to back to expose the front surface of the first sheet, the back surface of the sheet that directly overlies the first sheet can be viewed together with the front surface of the first sheet so that the one type of material on the front surface of the first sheet and the back surface of the sheet that directly overlies the first sheet can be viewed together.

35. (new) The book according to claim 34 wherein the first plurality of sheets comprises a sheet that directly overlies the second sheet and has a back surface with the

one type of related material thereon so that as the user flips through the book from front to back to expose the front surface of the second sheet, the back surface of the sheet that directly overlies the second sheet can be viewed together with the front surface of the second sheet so that the one type of material on the front surface of the second sheet and the back surface of the sheet that directly overlies the second sheet can be viewed together.

36. (new) The book according to claim 35 wherein the first plurality of sheets comprises a sheet that directly overlies the third sheet and has a back surface with the another type of related material thereon so that as the user flips through the book from front to back to expose the front surface of the third sheet, the back surface of the sheet that directly overlies the third sheet can be viewed together with the front surface of the third sheet so that the another type of material on the front surface of the third sheet and the back surface of the sheet that directly overlies the third sheet can be viewed together.

37. (new) The book according to claim 34 wherein the second plurality of sheets comprises: a) a first two sheets each having a type of related material on the back surfaces thereof; b) a separate two sheets each having a type of related material on the back surfaces thereof that is different than the type of related material on the back surfaces of the first two sheets; c) at least one sheet between the first two sheets; and d) at least one sheet between the separate two sheets, the peripheral edges of the first plurality of sheets configured so that a user can: a) engage the book at one location and flip through the book from back to front to serially expose the back surfaces of the two sheets without

exposing the back surfaces of a sheet between the first two sheets; and b) engage the book at another location spaced from the one location and flip through the book from back to front to serially expose the back surfaces of the separate two sheets without exposing a back surface of a sheet between the separate two sheets or the back surfaces of the first two sheets.

38. (new) The book according to claim 37 wherein the first plurality of sheets comprises a sheet that directly underlies one of the first two sheets and has a front surface with a type of material that is on the back surfaces of the first two sheets so that as a user flips through the book from back to front to expose the back surface of the one of the first two sheets, the front surface of the sheet that directly underlies the one of the first two sheets can be viewed together with the back surface of the one of the two sheets so that the type of related material that is on the back surfaces of the first two sheets and the front surface of the sheet directly underlying the one of the first two sheets can be viewed together on the back surface of the one of the first two sheets and the front surface of the sheet directly underlying the one of the first two sheets.

39. (new) The book according to claim 34 wherein the peripheral edges of the sheets in the first plurality of sheets each has a bound peripheral edge portion and an opposite peripheral edge portion, the binding is located at the bound peripheral edge portions of the sheets in the first plurality of sheets, the book at the opposite peripheral edge portions extends along a first line, as viewed from the front of the book, between a top and bottom of the book.

40. (new) The book according to claim 39 wherein a third plurality of sheets in the first plurality of sheets has straight edge portions each extending along a second line that is at a slight angle to the first line so as to expose a portion of a sheet behind each of the sheets in the third plurality of sheets at the first location in a manner that the sheets in the third plurality of sheets will not be engaged so as to expose the front surfaces thereof as a user engages the book at the first location and flips from front to back through the entire book.

41. (new) The book according to claim 39 wherein the opposite peripheral edge portion of the first sheet is substantially parallel to the first line and a sheet between the first and second sheets has an opposite peripheral edge portion that is spaced from and substantially parallel to the first line.

42. (new) The book according to claim 39 wherein the opposite peripheral edge portion of a sheet between the first and second sheets extends in a substantially straight second line fully between the top and bottom of the book.

43. (new) The book according to claim 42 wherein the second line is spaced from the first line.
